

Due: Monday Sep 11

HMC Math 142 Fall 2023  
Prof. Gu  
Related to Projects: Problem 1

Start this assignment as earlier as possible, definitely before Sunday night!

**Do:**

1. Find as many possible papers on how to fit a conic to data
2. Analyze which ones are most effective or most explainable and identify those with error(s).
3. Using one of the methods you found, find the best fitting of the data to the conic in the included python file

*I strongly encourage you to review all the problems in the Sample Final Exam with the help of the solution key.*
