

Due: Wednesday, October 11

HMC Math 142 Fall 2017

Prof. Gu  
Problem Set 6

Start this assignment before Sunday night!

## Read:

- Baby Do Carmo, Differential Geometry of Curves and Surfaces: Sections 2-4, 2-5, 2-6 and Section 5-10 on Abstract surfaces (starting on page 425)
- Handouts 8 and 9
- Lecture Notes

## Do:

**A: Please do a thorough review for your Midterm I.**

**B: Problems from Lectures**

- a) Let  $S$  be a subset of  $R^3$ . Show that  $S$  is regular surface if and only if  $S$  is locally diffeomorphic to  $R^2$ .
- b) Find five examples of regular surfaces such that each of them can be represented as a surface of revolution. Write down specifically for each example the generating curve, the rotation axis, and the parameterization (as a map) for the surface (including the domain of the map).

**C: Other Problems**

- a) Problem 10 on page 81, Section 2-3, Baby Do Carmo.
- b) Problem 9 on page 89, Section 2-4, Baby Do Carmo.
- c) Problem 15 on page 90, Section 2-4, Baby Do Carmo.
- d) Problem 18 on page 90, Section 2-4, Baby Do Carmo.
- e) Problem 1 on page 99, Section 2-5, Baby Do Carmo.

- f) Problem 3 on page 99, Section 2-5, Baby Do Carmo.
- g) Problem 9 on page 100, Section 2-5, Baby Do Carmo.

#### **D: Extra Credit Problems**

- a) Let  $T \subset R^3$  be a torus of revolution with center in  $(0,0,0) \in R^3$  and let  $A(x,y,z) = (-x, -y, -z)$ . Let  $K$  be the quotient space of the torus  $T$  by the equivalence relation  $p \sim A(p)$ . Can you tell what surface  $K$  is?
- b) Show that  $K$  is a differentiable 2-dimensional manifold.
- c) Show that  $K$  is non orientable in two different ways.
